Reason of 4E (4C) error code The only main reason of 4E error code is water blockage or deficiency in Samsung washing machine. Mater supply hose blocked due to sand or other obstructions. Kinked water supply hose can cause restrictions to the flow of water. Very less water flowing through hose due to limited amount of water supply. Samsung washing machine 4E code is very easy and simple. As we have already discussed that this issue occurs due to stoppage in water supply in washing machine. We can check the following things to troubleshoot 4C error in Samsung washing machine is open to full. Check for the kinks or bents in the water supply hose. Check that water tap connected to the machine and remove bents and kinks if available.Now check for any blockage in the water hose mesh filter. You can follow the steps given below to clear the blockage in water hose mesh filter. Turn off the water supply to washing machine by turning off the water tap. Remove the water hose from the washing machine. Gently pull out the mesh filter from the end of the hose, You can use use a pair of pliers to pull the mesh filter. Now rinse the mesh filter under the tap, until it is clean properly. Push the filter back into place. Screw the hose back onto the washing machine. Turn on the tap and then make sure all the pipe connections are watertight. Now restart the washing machine by switching the power button off and then on again. Check for the 4E CodeTurn ON the washing machine back on and start a cycle. The washing machine back on and start a cycle. service. Sometimes, Samsung fully automatic washing machine also shows 4E (4C) error code. Troubleshooting to 5E (4C) code can be find on our dedicated post, How to fix 4E code in Samsung Washer. The error code 4c appears on the display of the washing modes and the lower temperature indicator light up. The meaning of the error The water does not come into the machine. There is no cold water in the house or the water pressure is too low; The water hose is bent or squeezed - the machine uses it to take water; Mesh filter is clogged; The water escapes from the machine by itself. What to do next: Start the washing machine one more time in the same mode and check if there is a sound of water filling the machine, but it still displays the error, then: either there is too much laundry in the machine for the selected washing mode, Information on the maximum load of laundry for each washing mode can be found in the user's manual in "Operation" or "Instructions, blankets, etc. The machine requires certain amount of water for washing. If things absorb water more than planned, its level will decrease. The sensor will detect it and the machine will display an error. If there is not much laundry inside and there are no items that absorb a lot of water, then check the water pressure in the filler hose. If the pressure is low, you will see an error. In this case, you should call your plumber. You do not hear the sound of water If the washing starts and you do not hear the sound of water tap is open. Make sure that the water tap is open. Make sure there is cold water in the house. Open the cold water tap to do this. If there is no water or the pressure is low - call the plumber. The washing machine can not start washing without water. If the tap is open and the house has water, check the water pressure is normal Remove and clean the water pressure correctly, the water will drain from the machine and it will display an error. Unplug the machine from the outlet for 15 minutes to reset the control unit. Plug the machine into an outlet and start the same washing mode. If the pressure is weak Call a plumber. The washing machine can not start washing with a weak pressure of water. Unscrew the other end of the hose from the water pipe, and try to pour water into it. If water passes through the hose then it is clogged. Buy a new hose or wash it with a strong water jet. Top-loading washing machines from Samsung display a number of different error or fault codes to alert users of possible issues with the washing machine. The 4C or 4E is one such error or fault codes to alert users of possible issues with this error code and easily fix it. Also Read | 1E Error In Samsung Washing machine has detected an issue with the water supply. This could mean that your Samsung washing machine is not able to generate a supply of water due to a blocked or kinked water supply hose. And when that happens, you won't be able to hear the pouring of water nor will you see it through the washing process and while rinsing. At the end, the soapy water gets completely drained out, and there is no flow of pure water. Also Read | What Is IE Error In Washing Machine? How To Solve The IE Error Code In Your LG Machine 4C error: There is no cold water in the system. The water inlet valve may have some dirt or a foreign object stuck inside. There could be a problem with the connections for hot and cold water. This may happen while connecting to the water supply system. There is no water pressure or no pressure in the water supply system. The detergent container isn't connected to the hose. Also Read | How To Clean Washing Machine With Disinfectants During Coronavirus Pandemic? Samsung washing machine 4C error - Troubleshooting The first thing you need to do is turn on the cold water tap and ensure there is proper water supply. Samsung suggests that the water pressure must be between 0.5 bar and 8 bar. You should fully power off the appliance at the mains, move the washing machine forward to allow access to the water hoses and make sure that there are no kinks or bends in the water hose that is connected to the washer. If you still get the error, look for these two things: Check if there is any leakage from the tap that supplies water as it is a major cause of the 4C error. Ensure that the water pressure is strong. If there aren't any issues with the water pressure, the error could be due to hose mesh filter clogging. You can easily clean or replace it. You should clean the water hose mesh filter at least twice a year to prevent any build-up. Now try running the washing machine again. If the error persists, the problem is likely with the internal parts of the appliance which can be indicated by a professional. Also Read | How To Delete Zoom Account And Ways To Enhance Its Security If You Have One Image credits: Furulevi | YouTube Bosch washers are amazing appliances — until an error code pops up and they don't work as they should. Fortunately, some error codes may have simple solutions you can do on your own. Check out below for some common Bosch error codes and their possible fixes. Error Code E02 or E2 and Water Supply ProblemsIf you see an E02 or an E2 error on a Bosch front-loading washing machine, you're probably dealing with a problem relating to the machine's water supply. These error codes are essentially telling you the machine isn't able to fill itself with water when the wash cycle is beginning. If the machine is filling with water, the machine is telling you this error. Check your home's water pressure make sure the problem isn't within the home versus the machine. Next, check that the machine water supply is actually turned on. If it is, check the water hose to make sure it's not damaged.Error Code E13 and Drainage problem. Turn off the machine's power, and unplug the washer from the wall before you do anything. You're going to need to follow the detailed instructions in the machine's manual to get to the drain trap and lint filter. Once there, you'll be able to pull out whatever's clogging the machine. Remove the blockage and run a load of laundry while leaving the pump access door off. This way you can ensure the cap is back on properly and there are no further leaks. E17 Error Code and a Locked MachineIf you see the E17 error code while your clothes are still inside the machine as well as preventing the machine and slowly tip it backwards. This will allow the water to slowly drain away from the sensor, which will then make the machine door open. Error 5 or Error 6 and Water Temperature sensor is defective. Unplug the washer. When you're certain it's unplugged, take a look at the washer temperature sensor and reconnect any loose wires. If you notice the wire harness is damaged, replace it. If all of the other connect the water sensor. If the problem persists, reach out to a Bosch repairman. Error 14 and the Overfill LevelIf you see error code 14, that code means the machine is sensing the overfill level has been reached. If that's not the case, it probably means the machine water level pressure switch is broken and will have to be replaced. If it's overfilled, shut off the water supply faucet immediately. When this error code is activated, the drain pump runs immediately flooding your space. MORE FROM QUESTIONSANSWERED.NET
